2024 Proceeds for a ‘Blood gas analyzer’

- ♦ Arterial blood gas analyzer (ABG) test measures the oxygen content and carbon dioxide concentrations in the blood. Your body’s pH balance is also measured as part of and ABG test.
- ♦ This test is used to find out how well your lungs can move oxygen into the blood and remove carbon dioxide from the blood.
- ♦ Another common use of the ABG test is to measure effectiveness of oxygen therapy.
